

Welder/ Fabricator

Job Description

Joins, fabricates, and repairs metal and other weldable material by applying appropriate welding techniques.

Interprets equipment blueprints, specifications, diagrams or schematics to determine appropriate welding process.

Inspects completed welds to determine structural soundness.

Familiar with and complies with all safety requirements and protocols for working in a manufacturing environment.

Prepare the materials and set up for a welding device.

Requires a high school diploma and a certificate.

Has gained full proficiency in a broad range of activities related to the job.

Independently performs a wide range of complex maintenance duties under general guidance from supervisors.
